

EXECUTION WINDOW PRODUCT INFORMATION

T-Plan scripts, created and managed by T-Plan Professional, can be executed using a separate web enabled module; namely the Execution Window. This separate application is easy to deploy and is based on an individual licensing model for maximum flexibility.

Users are able to view and execute their test scripts in a simple step by step format.

Test execution progress is reported in real-time and the results feed directly into the main T-Plan Professional repository, via web services.

IMPROVING YOUR TESTING

New systems need to be 'fit for purpose'. For example the Execution Window application can construct a structured UAT test environment. Using this tool your business users or analysts can execute tests remotely, and in real time, so direct business led feedback can occur.

The Execution Window is a low cost and highly intuitive application, that will allow the execution of your testing to start straight away, whilst always retaining the control over your test coverage and success, that your business demands.

MAJOR BENEFITS

User acceptance testing – business users are only available for a limited time, the Execution Window will ensure that tests are prioritised and ordered in a simple to follow step-by-step method.

Outsourced testing – companies that use third party or separate divisions to execute their tests will greatly benefit from the Execution Window.

Remote working – today's companies allow flexibility within the workplace and employees can now work 'from home or hot desk', via the internet.

Test environment – having to install testing tools within your test environment can impact the systems that are being tested, using the Execution Window eliminates the need for client side software to be installed allowing for an uninterrupted test environment.

SUMMARY

- Time and cost savings – reducing the time to transfer information within teams and track their progress
- Low maintenance and simple to deploy – reduces any potential overheads for example training the User Acceptance Test team, or the Business Users
- No need to use network saved spread sheets or documents – the Execution Window reflects the testing schedule
- Easy to manage and report progress – tests are assigned to certain testers with progress easily monitored
- Consistent testing – correct tests are always executed and their test data is accessible and centrally stored
- Working to testing standards – ideal for audit and ISO 9000 requirements
- Global testing – work locally or globally with the Execution Window
- Easy to follow steps – testers are guided through the steps of the script which ensures continuity and quality

FEATURES

- Instructions, expected results and editable actual results forms for test scripts
- Raising incidents – integrated with T-Plan Incident Manager to raise, track and link any defects discovered
- View of linked requirements in a separate window
- View of test attributes & linked documents etc.
